

CAR UNIT (Receiver)

ESP32 + L298N + 4 Wheel Drive

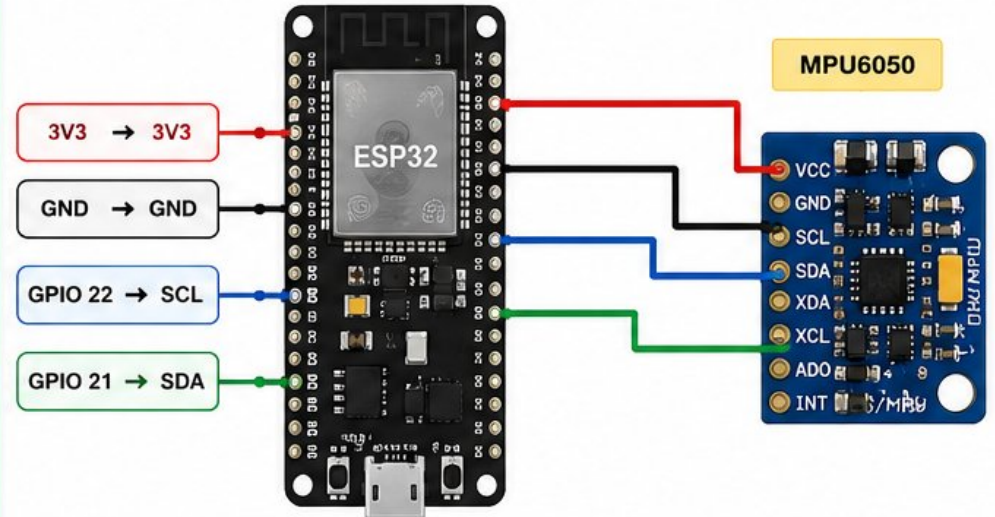

Notes:

- ✓ Remove ENA and ENB jumpers from L298N.
- ✓ Connect motors of each side in parallel.
- ✓ Battery powers the motors (through L298N).
- ✓ ESP32 can be powered using 5V from L298N 5V pin (if jumper is ON) or use a separate 5V supply.

HAND UNIT (Transmitter)

ESP32 + MPU6050 (Gyroscope + Accelerometer)

Power Options

Option 1

5V Power Bank

Option 2

3.7V Li-ion Battery

How It Works

Tilt your hand in any direction. MPU6050 detects the movement and sends commands to the Car Unit using ESP-NOW.

Hand Movement		→	Car Action
↑	Tilt Forward	→	Go Forward
↓	Tilt Backward	→	Go Backward
←	Tilt Left	→	Turn Left
→	Tilt Right	→	Turn Right
—	Keep Level	→	Stop
